

Vinculación en la cuádruple hélice mediante la promoción de la generación de energías renovables, tecnologías disruptivas y una economía verde.

Por medio de las políticas verdes , el tratado de Paris y en este caso de la reforma energética Mexicana que están dando paso a que empresas internacionales puedan invertir en el País , promoviendo distintos vectores energéticos que impactaran beneficiosamente a la economía y que no tendrán un impacto tan violento al medio ambiente como las no renovables , dando cabida a que la Sociedad civil se vea igualmente beneficiada por la promoción de estas como una inversión directa , promoviendo conocimiento y conciencia ecológica a su vez.

El objetivo es formar enlaces directos con gobierno, empresas, academia y Sociedad vinculando y promoviendo proyectos entre ellos para que juntos participemos en la agenda energética y la práctica de las ODS en nuestra vida diaria.

Overview

Civil society through non-governmental organizations or civil associations can contribute and have a direct impact either through public policies and international standards making it possible to generate beneficial alliances for all, promoting sustainable development through short, medium and long-term objectives term following agendas that are not affected or slowed down by the change of political parties, making possible lasting and effective partnerships to the relevance of each regulation or Project.

Methods

- Deal directly with the precursors and leaders of the youth energy sector, local, national and international.
- Generate economic support from the 4 helices for the institutions that make changes in favor of these movements for sustainable development.
- Promote the promotion of work and education for all in good practices
- Promote the direct or partial linkage of those that are relevant to make each public or private sector more efficient .
- Give action to the fulfillment of the energy agenda to the Paris Treaty by means of an ecological culturalization and the practice of the objectives 3,4,5,6,7,8,9,11,12,13,15y17 of the SDGs.

- Participating in events that encourage and promote synergy in a green economy.

Resultados

During the time I have worked with Student Energy, I have seen great goals being fulfilled, such as the Energy and Environment Fair 2018, which took place in Tonalá, Jalisco, Mexico, from October 9 to 11.

Where we contact different local, national and international companies informing, inspiring and uniting the next leaders of the global energy sector. We design spaces with multiple activities to train students in an environment of youth, awareness of the environment and energy transition. As well as our presence and participation in events of international stature.

Conclusions

To accelerate the projects in favor of a sustainable economy, the SED and the Paris Treaty, we must make synergy in the quadruple helix, be multidisciplinary throughout the country, efficiently manage their gross domestic product, generate a circular economy in the industry and apply, regulate and regulate each of them, giving order to their waste and wastewater, for public health and the reinterpretation of resources from the relevant media, stop relying on fossil resources by mitigating CO2 in the world and reduce climate change.
