EXTRACTIVES: CHALLENGES AND OPPORTUNITIES FOR THE SOUTH IN THE ENERGY TRANSITION

Adam Cohen¹ and Ricardo Raineri*²

September 2, 2022

Abstract

While the transition to a sustainable energy system will rely on a combination of additional deployment of existing technologies, deployment of new technologies, and development of innovative technologies, all will require an abundant, secure, and sustainable supply of minerals. The International Energy Agency noted that lithium, nickel, cobalt, manganese, and graphite are crucial to battery performance, longevity, and energy density. Rare earth elements are essential for permanent magnets for wind turbines and EV motors. Electricity networks need a considerable amount of copper and aluminum, with copper being a cornerstone for all electricity-related technologies. And iron and steel are critical for the renewal and improvements of infrastructure.

Countries with abundant mineral resources have a significant economic and workforce development opportunity as they contribute to the energy transition, the Paris Agreement’s objectives, and the UN’s Sustainable Development Goals. And at the same time, the challenge is to make mining and processing of extractives a sustainable industry that meets the growing demand for minerals with lower environmental impacts (lower emissions, lower water use, less waste).

Latin America is an important producer of critical minerals (copper, lithium, cobalt, and nickel), considering its current production levels and participation in the global reserves of copper, lithium, cobalt, and nickel.

Chile, Peru, and Mexico hold approximately 38% of the world’s copper reserves, with additional reserves found in Argentina, Brazil, Colombia, and Ecuador. Approximately 60% of the world’s identified lithium deposits are found in Latin America, mainly in Bolivia, Argentina, and Chile, and some in Mexico, Peru, and Brazil. Latin America also has significant nickel reserves, where Brazil hosts 17% of the world’s nickel reserves and Cobalt in Mexico and in small quantities in Brazil.³

This paper analyses the challenges and opportunities that LAC, a region with abundant natural resources, will have in supporting a sustainable energy transition, a role that goes beyond enhancing its energy matrix, the one with the lowest levels of CO2 emission, and is in its protagonist to sustainably deliver the critical minerals and cleaner fuels that the world needs to sustain the energy transition.

The presence of regionally abundant natural resources – both minerals and opportunities for expanded deployment of renewable energy (solar and wind) technologies for energy and clean fuels generation - can be a driver to transform the LAC into a Natural Laboratory for the innovation of clean technologies and improved processes, which in combination can make extractives more sustainable. Through the

³ USGS.
deployment of innovative technologies and integration of workforce development efforts, the region can address the main challenges confronted by extractives in the region, including the conflict related to resource governance, the distribution of socioeconomic benefits, and the environmental impacts, CO2 emissions, waste and water use, consultation with affected communities. Examples of how some countries are confronting these issues are making extractives cleaner minerals sources to support the energy transition. Where, using science and the development of technologies, progress is made in giving greater added value to its natural resources, the country can climb in global supply chains and contribute to the objectives of the Paris Agreement and Sustainable Development of the UN.

About the Authors:

Adam Cohen is the President and C.E.O. of Associated Universities, Inc. (A.U.I.). Before joining A.U.I. in 2017, Dr. Cohen was finishing his term at Princeton University. Until May 2017, he served as the Deputy Under Secretary for Science and Energy at the U.S. Department of Energy (D.O.E.), overseeing basic science, applied energy research, technology development, and deployment efforts, including the stewardship of 13 of the 17 D.O.E. National Laboratories. His experience also includes nearly seven years as Deputy Director for Operations at the Princeton Plasma Physics Lab, and 18 years at Argonne National Laboratory, where he held several positions, including Deputy Associate Director for Energy Sciences and Engineering, and Deputy Director/Chief Operations Officer. He has served as head of the U.S. Delegation on the ITER Council, on the New Jersey Department of Environmental Protection's Oyster Creek Oversight Panel, and on the D.O.E. Laboratory Operations Board. Earlier in his career, he spent four years in the U.S. Navy as a submarine officer, and he worked at Babcock & Wilcox manufacturing nuclear fuel for research reactors.
Dr. Cohen is a Senior Associate with the Center for Strategic and International Studies Energy and National Security Program.
He earned his bachelor's degree in materials engineering from Columbia University, his M.B.A. from the University of Chicago, and his Ph.D. in materials science and engineering from Northwestern University.

Ricardo Raineri, Past President International Association for Energy Economics, former Chilean Energy Minister, and Chairman of the Board of de Chilean State Oil Company (ENAP), former Alternative Executive Director of the World Bank Group, Professor Pontificia Universidad Católica de Chile, Economic Advisor at Associated Universities, Inc., and President Global Mining and Energy Partners LLC.
Economist with vast professional experience in the energy sector and institutional issues on the economics of regulation and antitrust policy, market structure, pricing, business strategy and competition, and corporate governance. Has published in various academic and professional journals and regularly consults for the public sector and private companies.
He has a bachelor's in economics, a business engineer professional degree, a master's in economics degree from the Pontificia Universidad Católica de Chile, and a Master of Arts (M.A.) and Doctor of Philosophy (Ph.D.) both in Economics from the University of Minnesota. Member of the Editorial Board of The Energy Journal.
